In cooperation with American manufacturer SPEAR Labs, cma audio expands its product portfolio to include high-end earphone Triton 1. The in-ear is manufactured in Charlotte, Tennessee, using the specially developed HABU three-way system and enveloping it in a most precious casing. Working alongside a specifically designed dynamic 10 mm driver and a customised dual balanced armature system, the ACT magneto-static transducer makes its debut. The high-end earphones' shells consist of sterling silver, cryogenically treated titanium from a fighter jet, and obsidian – outstanding materials for outstanding audiophile pleasure. The SPEAR Labs Titan 1 is fittingly delivered in a sophisticated jewellery box, including a braided copper/silver hybrid cable with Pentaconn connectors, a robust leather case and custom-made Nform XTR ear tips.

### **The contents of this press release**

- SPEAR Labs with Triton 1 distributed by cma audio
- The ultimate in-ear experience: SPEAR Labs Triton 1
- Exceptional materials: silver, titan and obsidian
- HABU and ACT – exclusive technologies for excellent sound
- Longevity and perfect fit with Nform XTR
- The Triton 1 sensation for all senses
- Scope of delivery, price and availability

### Devices for testing

**Gauting, Germany, 7th April 2020** – Beginning 1st April 2020, the American manufacturer SPEAR Labs is distributed in Europe, Africa and the Middle East by cma audio exclusively. The debut product Triton 1 starts the new cooperation with a bang: the classy in-ear headphones are a novelty in pretty much every way possible and a true gem for audiophile listening.

### **The ultimate in-ear experience: SPEAR Labs Triton 1**

There is high-quality, there is high-end – and there is the Triton 1 by SPEAR Labs. The explicit aim during the development of this new in-ear from the USA was to transcend limitations and create the ultimate earphones without compromise. The result is breathtaking: made from rare materials like sterling silver and obsidian and endowed with innovative driver technology, the Triton 1 takes the company's name literally, spearheading earphone development. It offers audiophile listening pleasure beyond high-end.

### **Exceptional materials: silver, titan and obsidian**

The Triton 1 experience begins with the materials, expertly crafted by SPEAR Labs in Tennessee. The casing is made from solid sterling silver, appreciated in the making of musical instruments for its warm timbre, but also adding great thermal regulation and antimicrobial properties. Next is the titanium sound chamber – the metal is difficult to process, but rewards the effort with a unique sense of space. The titanium used for the Triton 1 is recycled from a stealth fighter jet. Finally, the earphones are sealed with an obsidian lid with the company logo laid in. This volcanic glass used in jewellery and even surgical instruments, contributes outstanding isolation to the acoustical properties of the Triton 1 – and it also grants the earphones their special black shine.

### **HABU and ACT – exclusive technologies for excellent sound**

The SPEAR Labs Triton 1 diverts three ways to four drivers: the system is called the Hybrid Acoustically Balanced Universal technology, or HABU in short. Every driver has been optimised for the Triton 1. The first is a specifically designed dynamic driver with a laminated five-layered 10-mm membrane. Next is a world premier: the magneto-static ACT driver provides and exceptional frequency range with virtually no distortion. The driver system is completed by a set of dual balanced armature transducers finely tuned to the Triton 1. This proprietary three-way system ensures that the earphones sonically deliver on the promises made by the exterior design.

### **Longevity and perfect fit with Nform XTR**

Earphones can only ever be as good as their fit, so SPEAR Labs provides something special in this regard as well: the Nform ear tips were specially developed and consist of nano foam. They seal the ear particularly well and perfectly accommodate modern requirements with regards to high-resolution audio, high levels of environmental noise and an active lifestyle. The Xtreme Temperature Resistance (XTR) series maintains its pliability even in situations with wildly varying temperature and humidity levels. Nform XTR ear tips are hygienically immaculate and can easily be worn for extended periods of time.

### **The Triton 1 sensation for all senses**

The SPEAR Labs Triton 1 is a composition of unrivalled excellence. Three extraordinary materials and four superb drivers for three ways all combine

## PRESS RELEASE

to create a fine piece of jewellery that enthralls with its delicate feel, its terrific sound and its enchantingly good looks. Greek sea god Triton may rule the ocean waves – the SPEAR Labs Triton 1 rules the sound waves.

### **Scope of delivery, price and availability**

The scope of delivery for the SPEAR Labs Triton 1 includes a braided copper/silver hybrid cable with Pentaconn connectors, a sturdy leather case and a set of Nform XTR ear tips. Distributor cma audio will also include an adapter from Pentaconn to regular 3.5-mm jack. The Triton 1 will be available from end of April. The MSRP is 2,999.00 EUR (including 19% VAT).

### **About SPEAR Labs**

Dale Lott founded SPEAR Labs LLC with the aim of creating „Special Products for the EAR“. Lott had previously founded Aurisonics, a company so successful in the field of professional audio applications that it was acquired by music instrument giant Fender. After three years as Vice President of Product Development for Fender in-ear systems, Lott moved on to found SPEAR Labs. The company debuted in 2019 with the Triton 1, showcasing what Lott means when talking about “special products for the ear”: exquisite materials from obsidian to titanium from a fighter jet and innovative technologies from the ACT magneto-static transducer to the HABU driver system for the ultimate audiophile experience – spearheading high-end earphone development.

### **About cma audio**

cma audio GmbH distributes audio technology products, systems and services. The global value added distributor focuses on pro audio and hifi. The business model firmly stands on two strong pillars: while cma grants international companies wide-ranging access to European markets, products by German manufacturers are distributed worldwide. With Audeze, FERROFISH, IsoAcoustics, Lake People, MARIAN, Mogami, MXL, Niimbus, Prism Sound and Violectrics, cma audio enjoys the trust of reputable companies. All products in the catalogue of cma audio GmbH are distributed exclusively. Our staff's expertise and dedication lay the foundation for professional consulting and high customer satisfaction. As part of the cma audio philosophy, passion for music and technology unites the team at the company's headquarters in Gauting near Munich, Germany. For more than 20 years, cma audio has reliably provided resellers, online shops, system houses and both professional and institutional users with outstanding products.
