Skrillex • Imagine Dragons
Gloria Estefan • Sam Smith
N.W.A. • Frank Sinatra

Driving all volumes equally

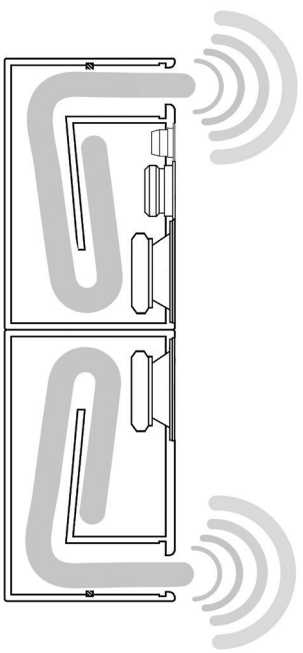

The effortless ability to drive even the largest studios is one of the many characteristics that set PMC loudspeakers apart from other professional monitors.

Whether you choose Active or Passive, PMC monitors offer immense headroom – so you have the freedom to drive them at any level with complete confidence.

Whilst the response of other speakers may vary dramatically depending on the volume, our innovative design means PMC monitors maintain the same tonal balance, soundstage and resolution at all listening levels, from low to high.

Advanced Transmission Line™

Our unique Advanced Transmission Line (ATL) bass-loading technology lies at the heart of every PMC loudspeaker from the compact twotwo.5 active nearfield, up to the mighty QB1 XBD-A.

ATL is the reason why our monitors produce lower, better, cleaner-sounding bass and perform more accurately and consistently than any other speaker available.

- The benefits
- Deeper, more accurate bass
 - Lower distortion
 - Higher power handling
 - Consistent tonal balance at all levels
